

HT Vista for Receptionists

HT Vista is a non-invasive cancer detection tool, with screening and diagnostic capabilities for lumps and bumps in dogs.

The pain-free scan enables early cancer detection by identifying malignant masses in time, while also allowing teams to rule out cancer without invasive procedures.

1

Prep your patient

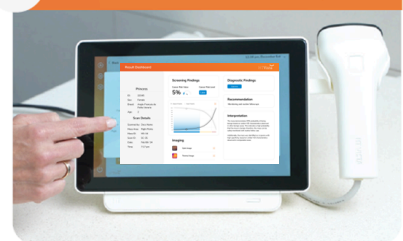

2

Scan for 40 seconds

3

Get results on the spot

Step 1. The fur around the mass is clipped

Step 2. The mass is gently scanned for 40 seconds

Step 3. The results are analysed and returned on the spot

Step 4. The vet will discuss the result and next step
